

## CORDOVA GAME

- Customize.

01. Right click and Extract the .zip file.

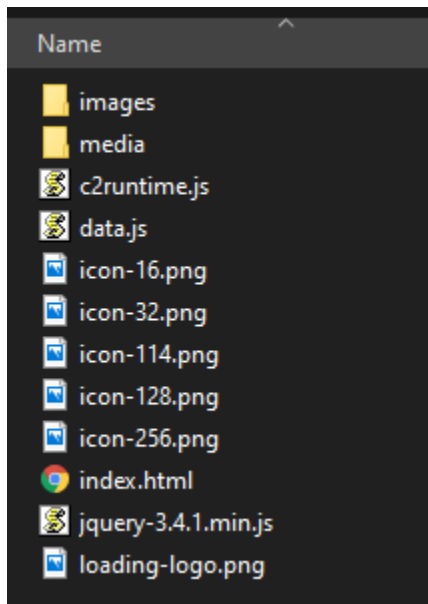

02. Go inside the extracted folder.

03 You can see these files,

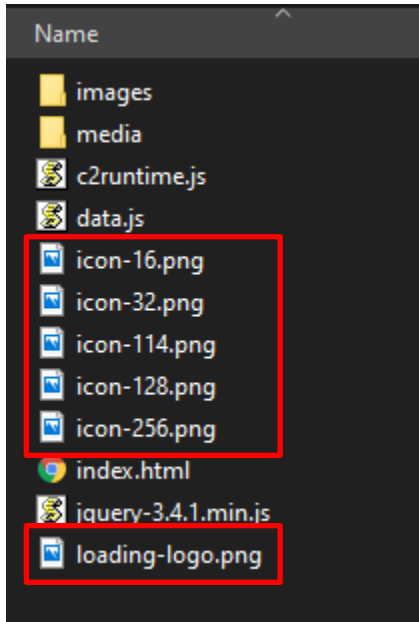

04. There is a folders “www” , Open it.

You can see these files.

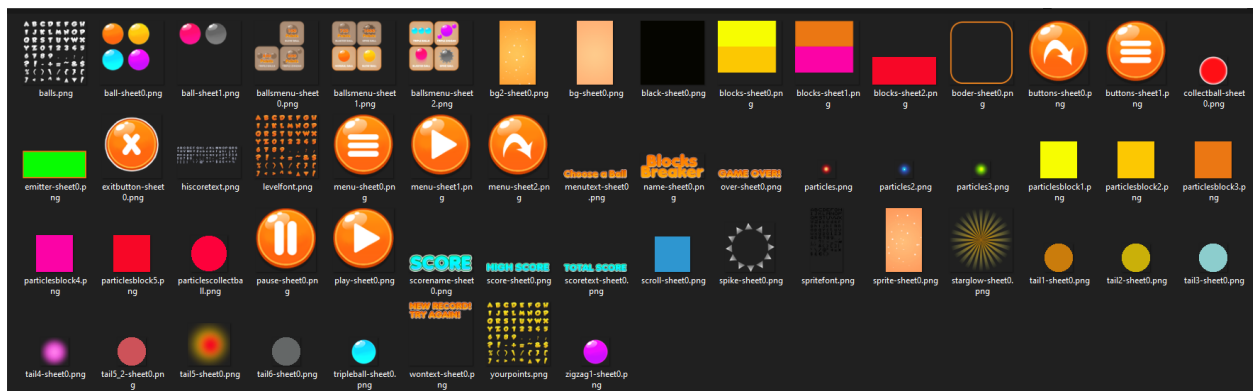

05. To change the game icon, you can replace images with these,

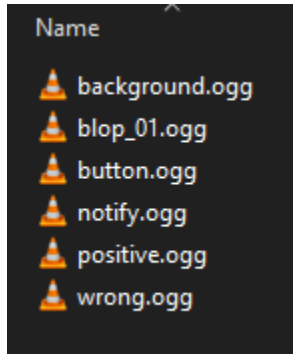

Use same sizes.

06. To change game graphics. Go to the “images” folder.

Replace images with same sizes.

07. To change the sounds, Go to the “media” folder.

Replace with your sounds but you should use the same names and same formats.

08. To change the game name.

Right click on “config.json” and open with notepad.

```
"id": "com.cgfx.game", 1
"version": "1.1.0.0", 2
"name": "Blocks Breaker", 3
"description": "Endless Game", 4
"author": "CGFX", 5
"email": "cgfxsrilanka@gmail.com", 6
"website": "http://www.cgfxsrilanka.net", 7
"fullscreen": "true",
"useragent": null,
"orientation": "portrait",
"icons": [{
```

1. Game id : use “com.companyname.name of the game.
2. Game version.
3. Name of the game.
4. Game description.
5. Company/your name.
6. Your Email Address.
7. Your website (If you have)

After all.

Open "config.xml" with notepad.

```
<?xml version="1.0" encoding="UTF-8" ?>
<widget id="com.cgfx.game" version="1.1.0.0" xmlns="http://www.w3.org/ns/widgets" xmlns:cdv="http://cordova.apache.org/ns/1.0">
  <name>Blocks Breaker</name>
  <description>Endless Game</description>
  <author href="http://www.cgfxsrilanka.net" email="cgfxsrilanka@gmail.com">CGFX</author>
```

Change all details here. (id, version, name, description, web, email, author) same as "config.json"

09. When you build apk, the remove these on "config.xml"

10. after you completed it all. You can build apk or ios using Cordova.

Follow this site. [www.cordova.apache.org](http://www.cordova.apache.org)
